Stage Two =====> Stage Three

1. Download and install a code editor (for example, VSCode).
2. **Compulsory**: Write a simple program that prints your name using your language of choice.
3. **Frontend track**: build a html page that contains an application(resumè) to join a team. Host the page on Netlify or any platform of your choice. CSS is involved. You can also use any frontend language.
4. **Backend track:** build an interactive resumè page that contains a form. Host the page on heroku.
5. **Mobile track:** build a simple app that collects user input and displays the input on the screen.
   a. **Flutter**: you have the freedom to use any of Flutter's stable platforms.
   b. **Native:** you have the freedom to use your language of choice.
6. Push your code from 2 and either 3, 4,or 5 to Github.
7. The submission **must** contain the Zuri/HNG/i4g logos and link to the website.

You will be required to submit the following:
